

a) normally visible surface and a normally non-visible surface, and wherein each fixture has water supply connections on the normally non-visible surface and has a functional and decorative element on the normally visible surface, and wherein the functional and decorative element of all such fixtures may be removed and replaced from the fixture from the visible surface without affecting the water supply connections on the normally non-visible surface, each fixture including a waterway attached to the water supply connections, each waterway extending into its respective functional and decorative element to supply water thereto, and fastening means mounted on each waterway on the visible surface, each fastening means including means for attaching and removing its respective decorative and functional element from only the visible surface of the support.

Please amend Claim 17 as follows:

17. (Amended) The plurality of water control plumbing fixtures of claim 16 wherein one of said functional and decorative elements is a faucet spout.

Please add new claim 23.

23. (New) The plurality of water control plumbing fixtures of claim 16 wherein one of said functional and decorative elements is a shower arm.
